## IK Multimedia releases iRig Pro DUO: True mobility meets professional audio

*iRig Pro DUO gives guitarists, bassists, keyboard players, vocalists, producers and engineers true mobility with the first self-powered dual-channel professional mobile audio interface for iPhone, iPad, iPod touch, Android and Mac/PC*

**October 27, 2015** - IK Multimedia, the leader in mobile music creation technology, is pleased to announce **iRig® Pro DUO**, the first truly mobile high-definition dual-channel mobile audio and MIDI interface for iPhone/iPad, Mac/PC and Android devices. **The smallest fully-featured dual-channel interface, iRig Pro DUO** finally frees musicians to create inspired music on the go with studio-quality audio and a whole suite of features found in interfaces costing three times the price. Designed and made in Italy, it comes fully loaded with everything musicians and producers need to record on the move.

iRig Pro DUO features two XLR/TRS combo audio input jacks with gain controls and phantom power, ultra-low noise/high-headroom preamps, high-end 24-bit AD/DA converters, MIDI IN/OUT jacks for connecting controllers and other MIDI devices, a stereo pair of TRS balanced output jacks and a headphone out with level control. To top it all off, it's also truly self-powered via 2 AA batteries and comes with an array of additional powering options. No other studio-quality audio interface offers this level of portability at such an affordable price. And, most remarkably, it

# IK Multimedia. Musicians First.

manages to fit all of these features (and more) into an extremely compact enclosure that fits easily into the palm of a hand. With iRig Pro DUO, true mobility for portable simultaneous 2-channel recording and processing has finally arrived for everyone.

## **True mobility**

What makes iRig Pro DUO stand out in the crowded interface market is its remarkable level of portability and professional audio quality. Designed to fit recording studio specifications into a travel-ready enclosure, it is the smallest fully-featured dual-channel interface available. Its compact size and multitude of powering options make it ideally suited for use while on the move - for true "off the grid" performance, iRig Pro DUO can be powered by 2 AA batteries (included). Plus, iRig Pro DUO can be powered via USB for Mac/PC or via an optional wall power adapter. This means that it's ideal for use everywhere: on the road, at a gig, in the studio and anywhere in between. It's a perfectly portable self-contained mobile studio solution for the musician or producer who wants the utmost in recording quality and versatility.

iRig Pro DUO is the most compact dual-channel interface available. Measuring just 130 x 75 x 38 mm, it fits easily into a gig bag, laptop bag, pocket or the palm of a hand.

## **True pro quality**

iRig Pro DUO's high-grade analog circuitry and no compromise power supply design provide studio-quality sound on the go. Its dual XLR/TRS audio input jacks can be used to plug in guitars, basses, keyboards, line-level instruments and microphones to capture pristine and transparent 24-bit audio on the go. Players can record two channels of audio simultaneously using two instruments, two studio microphones or any combination of instruments they desire. It's perfect for singer/songwriters, guitar and bass jammers, duet singers and more - the possibilities are infinite. MIDI controllers and instruments can be connected with ease thanks to iRig Pro DUO's MIDI IN/OUT jacks. All the required cables for connecting MIDI hardware are included (TRS to MIDI-DIN).

With its dual inputs, musicians can make multi-track recordings on the fly. iRig Pro DUO can accommodate high-end phantom powered condenser microphones - 48V phantom power is available with the flip of a switch. Sound can be conveniently monitored with zero latency via either its 2 balanced TRS outputs or its headphone out jack with onboard level control.

## **Superior output**

iRig Pro DUO's high-quality balanced outputs can easily drive any kind of input. They deliver a stunningly clear audio signal thanks to its exceptional output drivers. The totally floating design of iRig Pro DUO's balanced outputs protect it from potential ground loop issues and buzz when performing onstage with iOS devices or laptops. This superior design makes it the ideal audio interface for live performing musicians that want to connect their gear directly to the stage audio system without having to use any special cables or problematic DI Boxes.

## **True studio sound**

When it comes to recording interfaces, they're really only as good as they sound - and iRig Pro DUO sounds absolutely fantastic. This is due to world class AD/DA conversion, no compromise analog stages, superior power supply, ultra-low noise and high-headroom preamps and professional balanced audio outputs. Simply put, iRig Pro DUO lets musicians and producers make great sounding recordings with all the musical subtlety and nuance of a pro studio interface, but in an extremely mobile form-factor.
