IK Multimedia Announces iRig Recorder for Android

Easy-to-use audio recording app features built-in editing and processing, and multiple export options

January 8, 2013 – IK Multimedia – the leader in mobile music creation apps and accessories – is proud to announce **iRig® Recorder** for the Android operative system. iRig Recorder is a powerful audio recording and editing app that turns a mobile Android device into a professional field recorder, and makes it easy to capture interviews, classes, rehearsals, music performances, lectures, and more, with outstanding quality. When used with the IK range of mobile microphones and accessories for Android including **iRig MIC**, **iRig MIC Cast** and **iRig PRE**, iRig Recorder provide a complete, ultra-portable solution, to any recording needs on the go for the popular Android platform.

In the Field

iRig Recorder is a simple to use audio recording app that can start recording immediately when it is launched making it the perfect “on the spot” field recorder.

PRESS RELEASE

Users simply launch the app and hit the record button, or can also configure the app to start recording audio immediately upon launch. The app automatically groups recordings by date, tags them with geographic location information, and saves the original file as a backup. Recording time is limited only by the available memory on the device. iRig Recorder can be used with the built-in device microphone, or for superior sound quality can be used with IK's iRig MIC handheld microphone, iRig MIC Cast compact device microphone, or iRig MIC Pre professional studio XLR microphone preamp, all designed for capturing broadcast quality audio on the go.

Editor's Choice

Recording is only part of the story with iRig Recorder. It also provides a precise waveform editor, which allows for selecting, cutting, and cropping of the audio content. Automatic onboard audio processing options can optimize recording levels and tone, remove background noise and increase the overall audio quality so that anybody can produce professional quality audio with no formal training.

The app can also speed up or slow down a recording without changing the timbre. With its onboard processing and editing features, it's possible to produce podcasts or other types of programming, all without leaving the app.

Export Options

Finished recordings can be easily shared by e-mail and FTP, over Bluetooth, through USB cables, from an SD card, or via apps installed on the device. Files can be exported as CD-quality WAV files, or as compressed .ogg files, ranging from 64 to 192 kbps.

A free version of iRig Recorder is also available, which provides the same recording, level-optimization and export features as the full version, and users can add the editing and additional processing via in-app purchase.

IK Multimedia is the leader in mobile music creation accessories and offers several external miking options for the Android platform that allow for the capture of higher quality recordings than can be obtained with a device's built-in mic. iRig MIC is a quality handheld mic designed for both close- and distance-recording applications. iRig MIC Cast is an ultra-compact, high-quality personal mic that attaches to the mobile device. iRig PRE is a mobile mic preamp that allows for the use of professional XLR microphones with. It even has phantom power for condenser mics. All of IK's microphone products allow for real-time monitoring of the recordings thanks to their included stereo output connector for headphones or speakers.

Pricing and Availability

iRig Recorder will be available at the end of January on the Google Play Store, and is priced at \$4.99.
