**FOR IMMEDIATE RELEASE**

## IK Multimedia updates AmpliTube for iPhone and iPad with vocal effects

*VocaLive effects are now available for in-app purchase plus new preset management and more*

**May 2011, Modena, Italy** – IK Multimedia has released **AmpliTube 2.2**, an update of its flagship iOS app, **AmpliTube**, the mobile guitar rig and recording studio for iPhone, iPod touch and iPad. The free update adds the five vocal effects of IK's acclaimed **VocaLive** app which are now available for in-app purchase just like the popular gear models from AmpliTube Fender™. With the new add-ons, AmpliTube for iPhone and iPad continues to evolve as a full-fledged mobile processing and recording studio for all music creation, composition and production needs.

The new vocal effects now available inside AmpliTube 2.2 include **Choir** (a 3-part harmonizer), **Morph** (a pitch and formant shifter), **Pitch Fix** (an automatic tuner for correction or production effects), **Double** (a voice doubler) and **De-Esser**.

AmpliTube 2.2 also adds the vocal canceller features (NO VOICE) from VocaLive to its SpeedTrainer interface – where you can slow down or speed up backing tracks without changing their pitch – that is included free in all versions of the AmpliTube mobile app. This not only removes the vocal from an existing track, it can also

remove the guitar solo making Speed Trainer an even better tool for learning and rehearsing your favorite solos or vocal parts.

Additionally, AmpliTube 2.2 includes a newly enhanced preset system for managing all of your sounds. Presets are now organized in a folder-panel system to make storing, finding and recalling your library of sounds even easier. Dedicated "favorites" buttons with ten available banks store your 40 most used presets for instant recall. And when the entire AmpliTube Fender™ gear bundle or the entire VocaLive effects bundle are purchased, the new preset system will show also their related presets.

The new **iRig Mic** handheld quality condenser microphone accessory for iPhone and iPad is the best way to get vocals and acoustic instrument recordings inside AmpliTube where you can take advantage of the new vocal effects. Together with the **iRig** electric guitar and bass interface adapter, they are the most complete set of mobile recording tools that you can always have with you.

With the new add-ons and its range of iRig accessories, AmpliTube is the most advanced real-time mobile processing and recording studio available for iOS devices today. Play, practice and record anywhere and anytime.

**AmpliTube 2.2 features:**

- Real time guitar and bass mobile multiFX + recording app
- Full rig with 3 simultaneous stompboxes + amp with effects + cabinet + mic
